Nature is
Above All

Nature is Above All

Stonelam porcelain slabs are a natural choice for environmentally conscious customers. Made from 100% natural materials like clay, metamorphic rocks, granite chips and feldspar, Stonelam offers a sustainable choice with minimal geological impact. The core philosophy of Stonelam is - Nature is Above All and that resonates with the product and its features

Manufactured
in Italy

Manufactured in Italy

Conceived and curated in Italy which is also known as 'il Belpaese'(beautiful country), Stonelam Large Format Porcelain Slabs are a perfect symphony of beauty and nature. Intricately created by a sophisticated technology the slabs are a mere 3mm* and 5mm* thick. The slabs are a perfect mix of modern science and nature. Born to impress every eye that it captures, Stonelam slabs are designed with natural pigments that create a niche out of themselves

Note: Long press the image to watch the Manufacturing Process.

The
Range

The Range

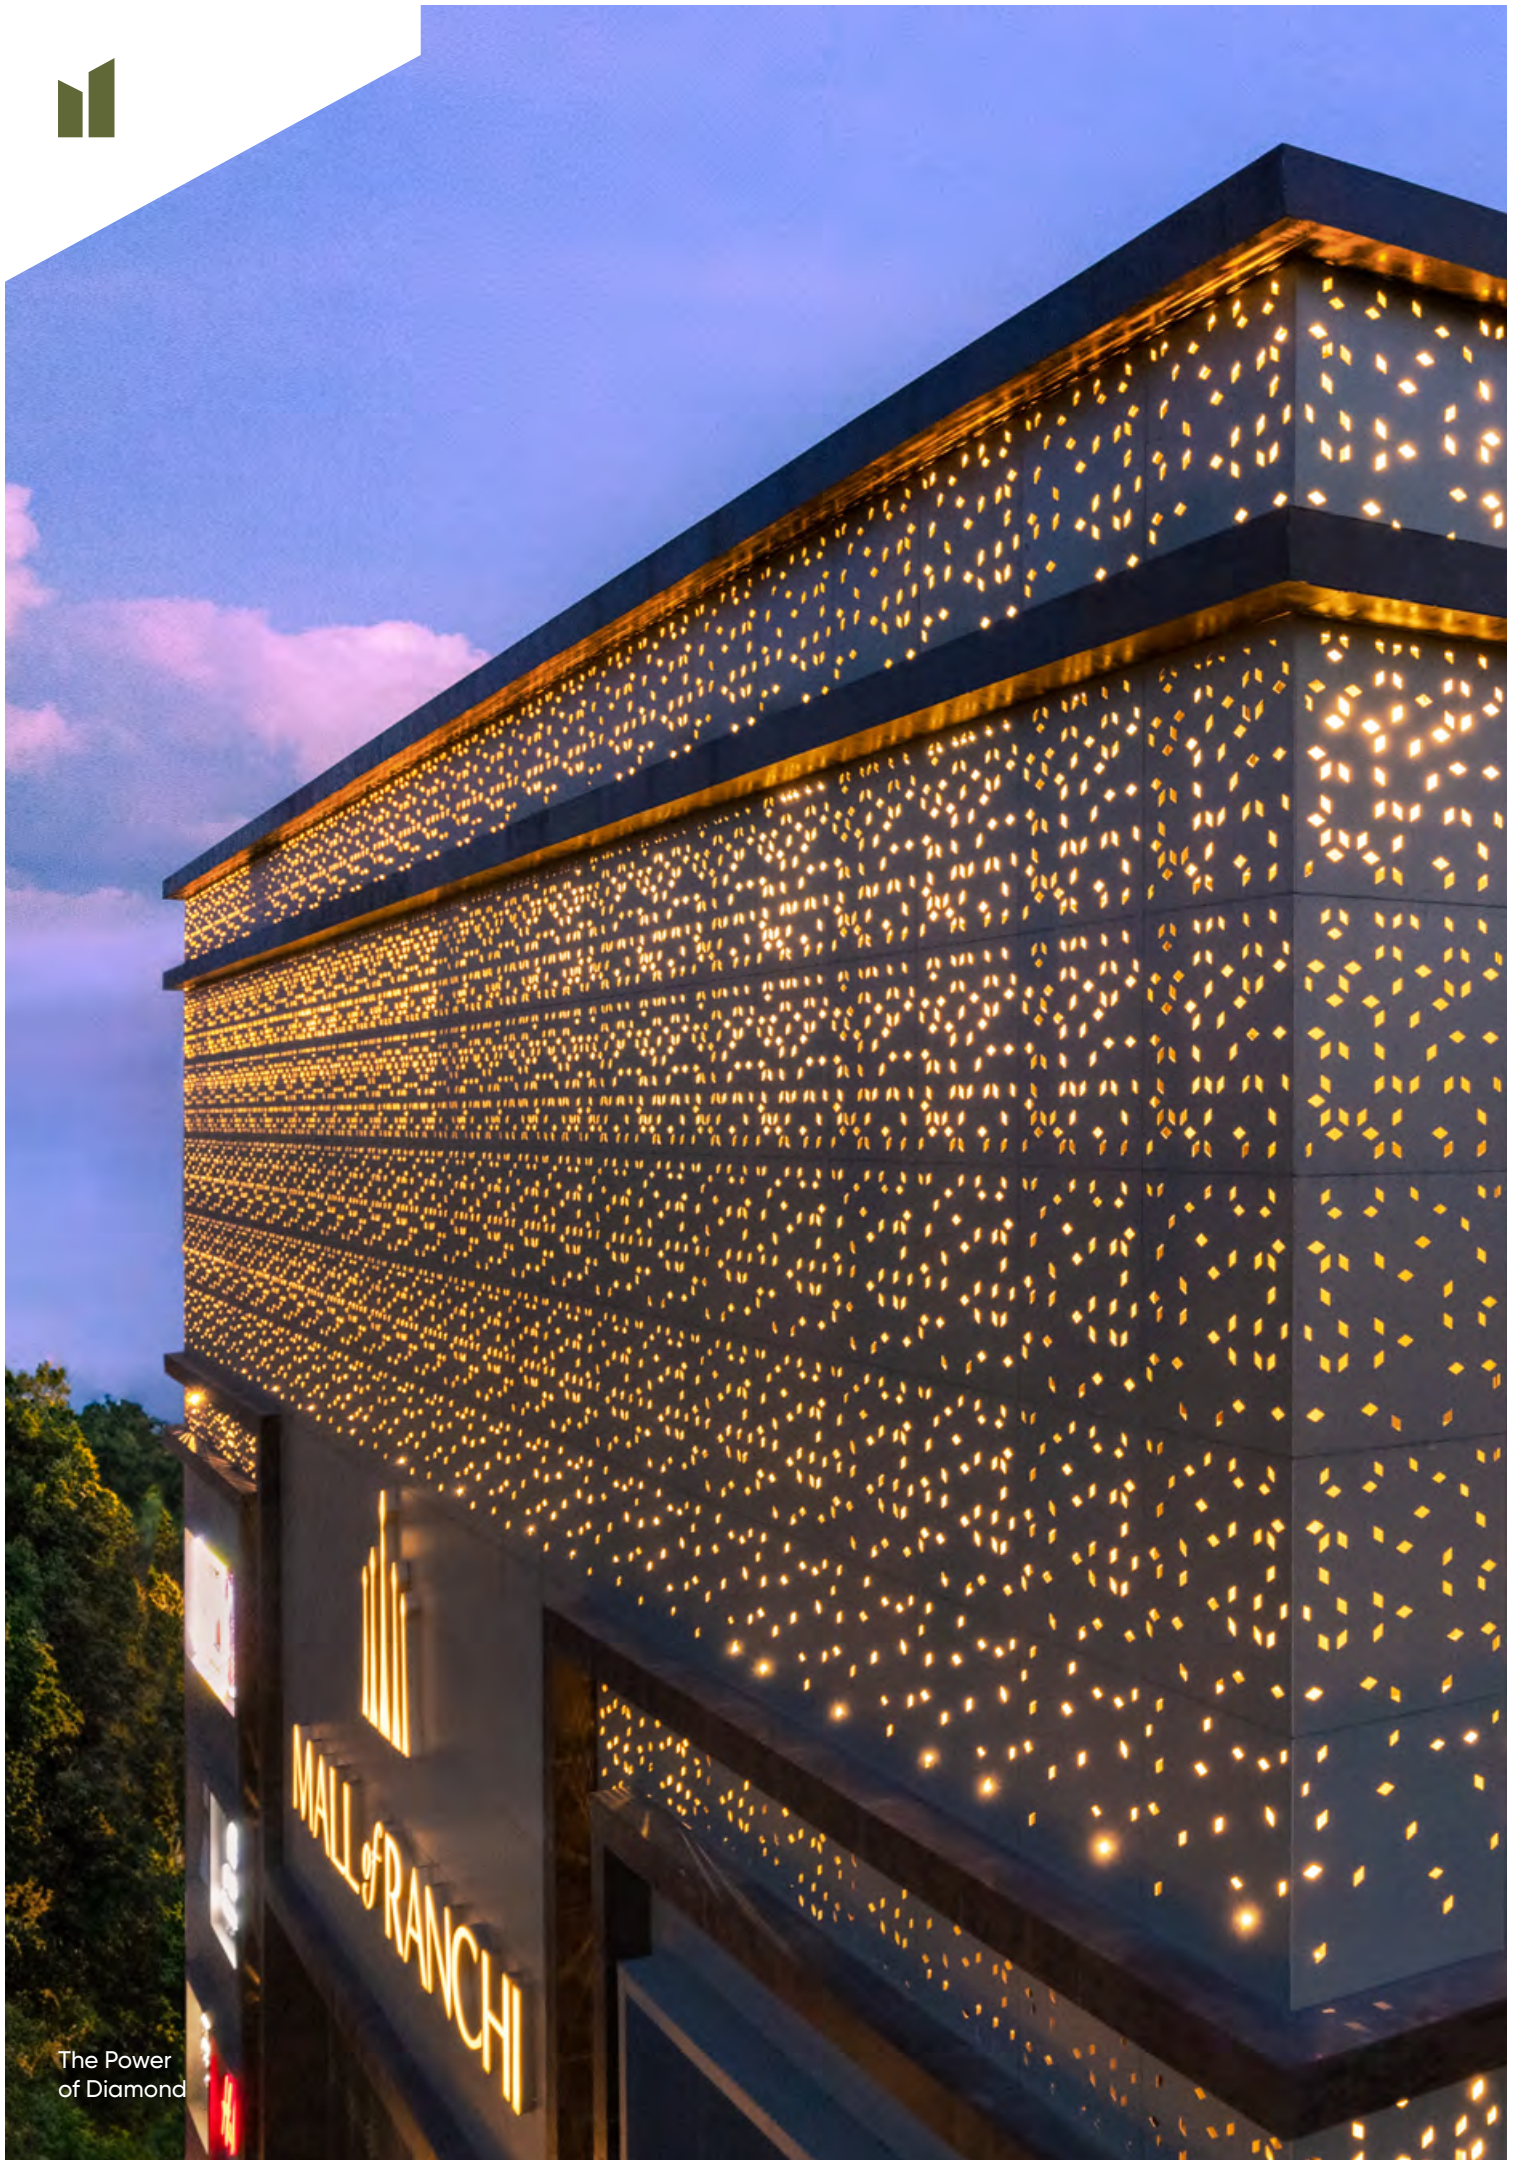

ELEGANTE 3MM+

Unmatched finesse in ultra-slim elegance

REGENZA 5MM+

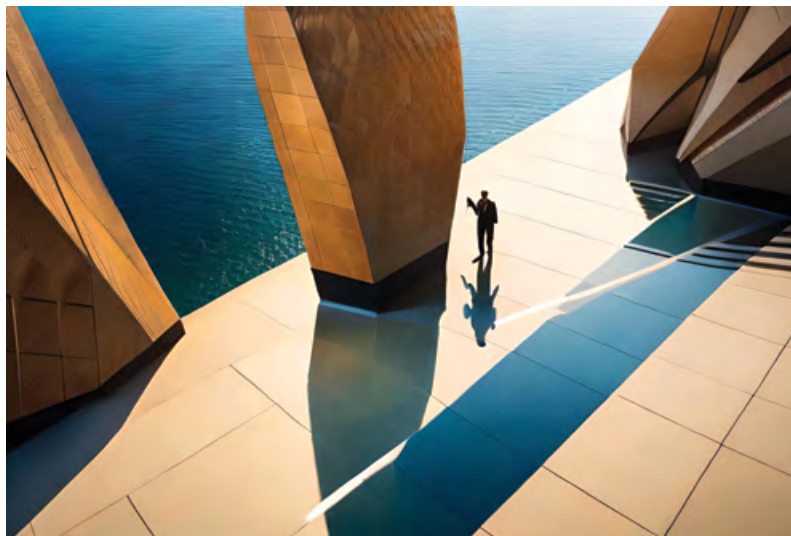

Robust opulence, full-body versatility

The Power
of Diamond

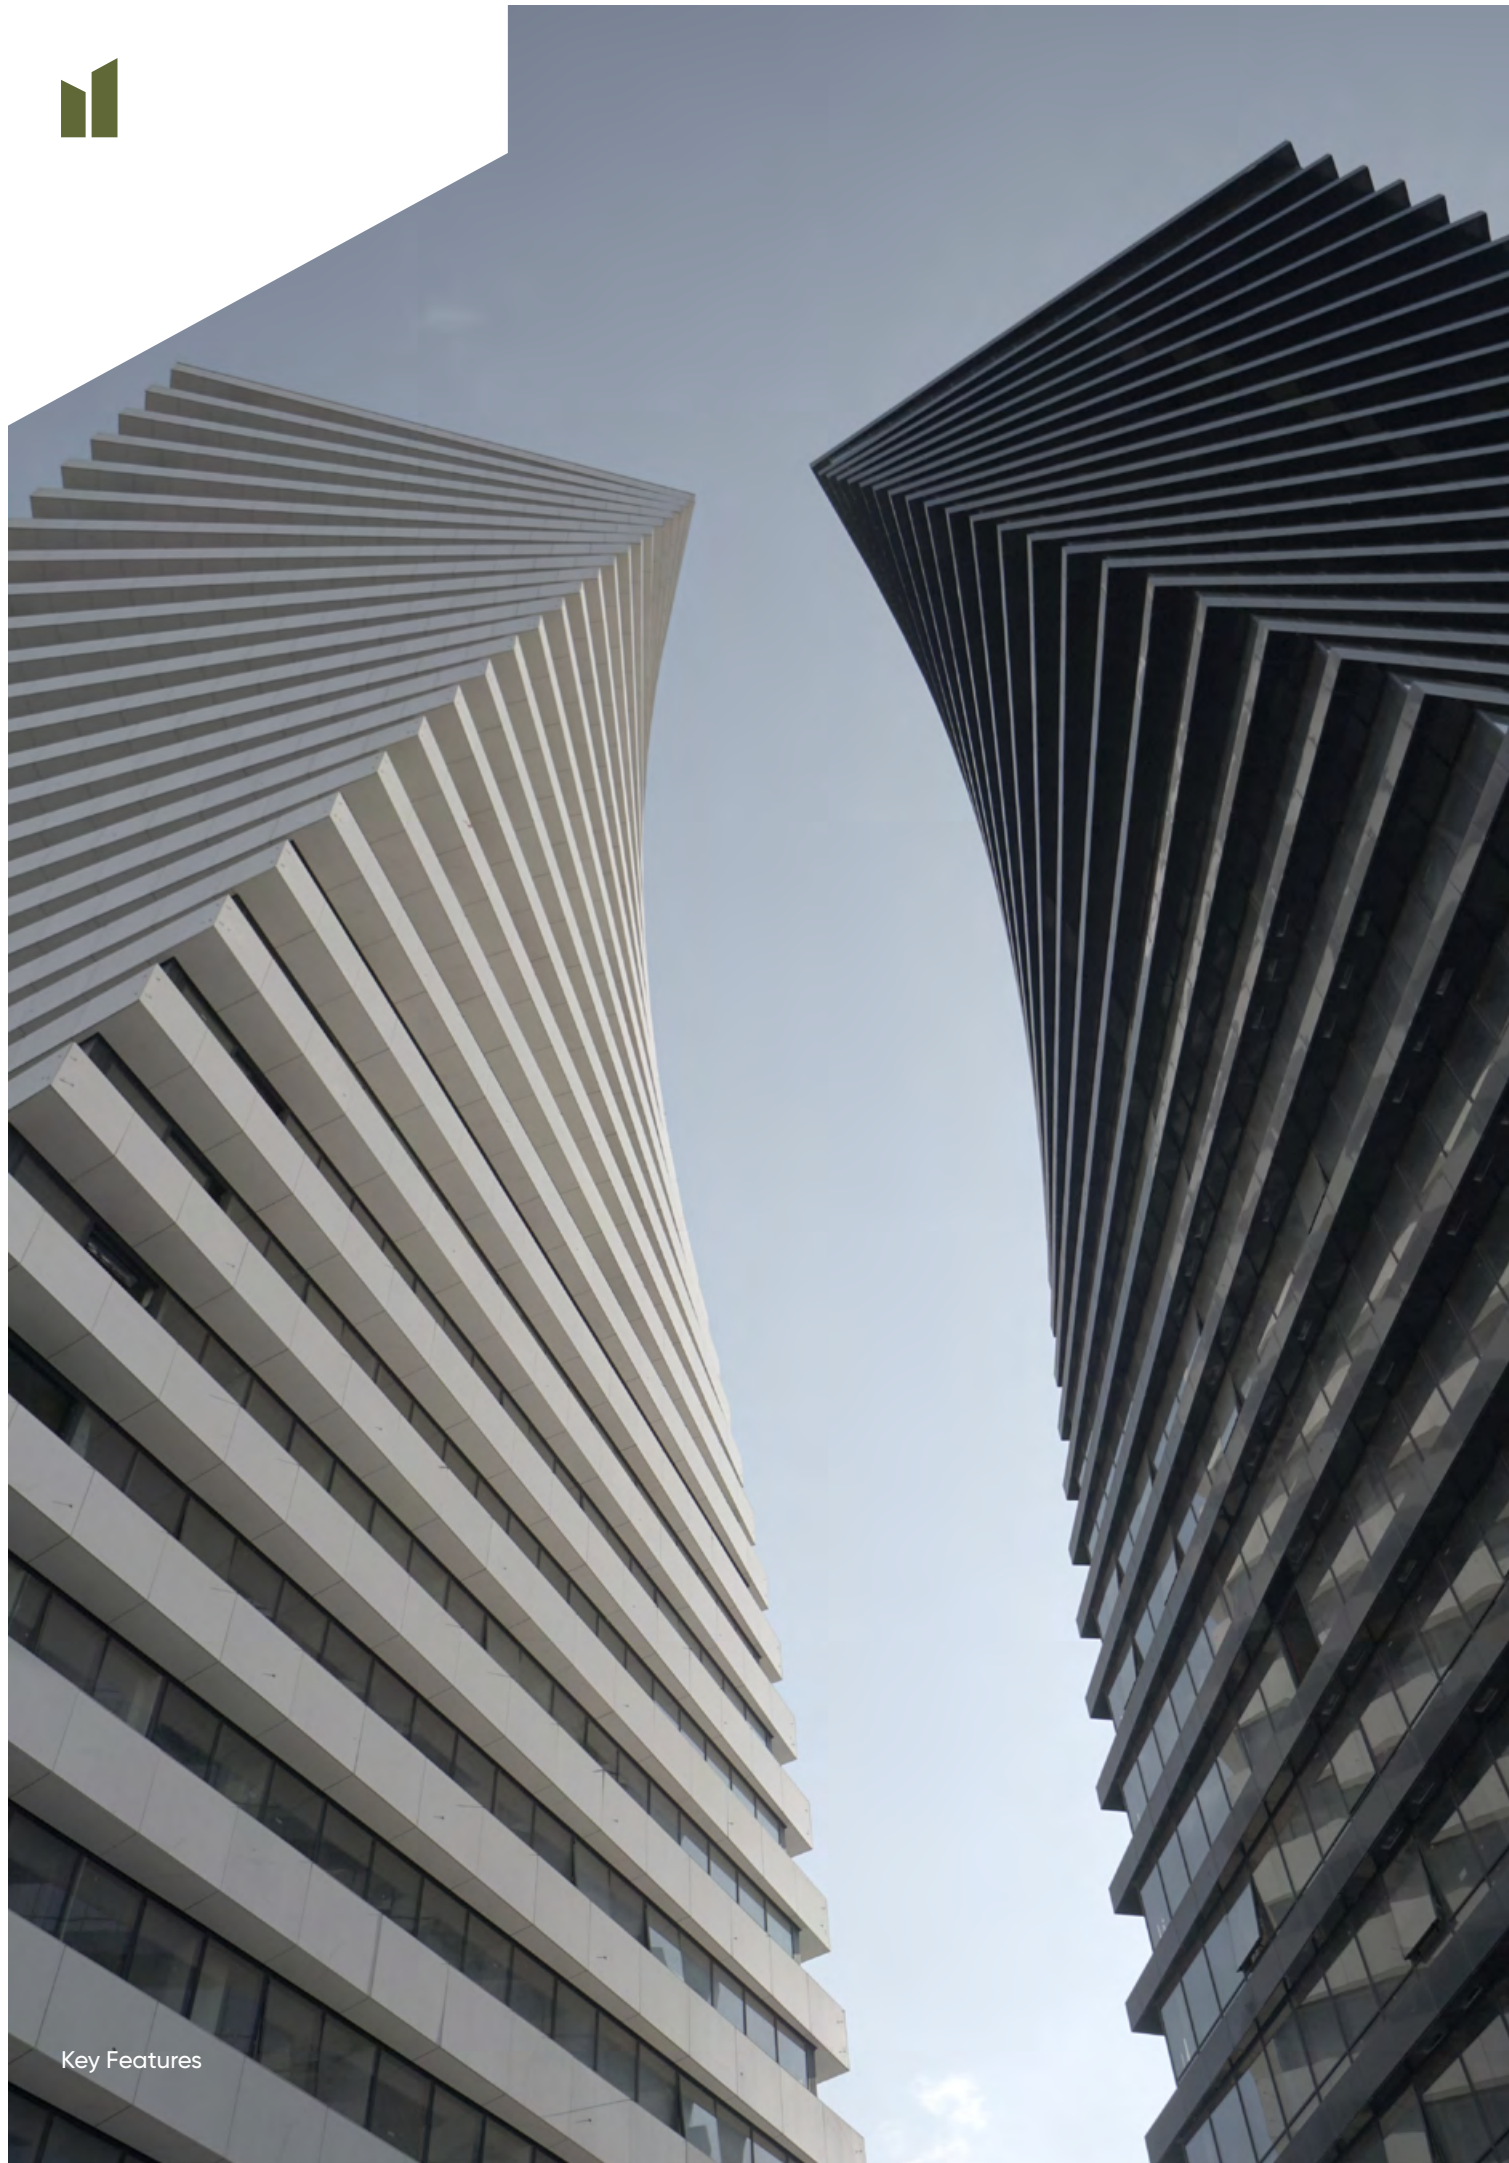

The Power of Diamond

Stonelam porcelain slabs are made by a sophisticated process called Sintering

- Similar to the creation of American diamonds
- The raw materials are heated at 1200 degrees under a pressure of 6 bars
- The final product becomes a non-porous hard porcelain slab

Key Features

Key Features

Stonellam porcelain slabs are made up of 100% natural materials and pigments, carefully manufactured in Italy

UV RESISTANT

Stonellam slabs' colours do not fade away when exposed to sunlight or other extreme weather conditions

FIRE RESISTANT

No organic materials are used in the production of Stonellam slabs. When in contact with fire, it does not burn or emit smoke or toxic substances

SCRATCH RESISTANT

Stonellam slab's hard surface makes it resistant to scratches and abrasions. The properties remain unchanged even after intensive use and frequent cleaning

ECO-FRIENDLY

Stonellam slabs are made from natural raw materials and sustainable technology. It does not emit any harmful substances into the environment

CHEMICAL RESISTANT

Stonelam slabs are resistant to most organic and inorganic solvents*

WATER & FROST RESISTANT

With a water porosity level of lesser than 0.1%, Stonelam slabs are resistant to liquids and frost and can handle low temperatures with ease

GRAFFITI AND STAIN-PROOF

Stains of any kind and the strongest of paints can be easily removed from Stonelam slabs, making the colour last longer

THE FIBREMESH ADVANTAGE

Stonelam structurally reinforces slabs with double-coated fibremesh. This allows for superior bonding with the original structure and sturdier application

WEATHER-PROOF

Stonelam slabs can resist moisture, UV rays, high temperatures and frost. This enables them to retain their features and chromatic properties for long periods of time when compared to traditional solutions like natural stones, ACP and paints

*Hydrofluoric acid being the only exception

DIMENSIONAL STABILITY

Stonelam slabs are not subject to dimensional variation of any significance, as they have a low coefficient of thermal expansion

CUT TO FIT YOUR WALLS PERFECTLY

Stonelam slabs are 3 metres in length, that is the height of an average Indian room. This means a perfect fit, zero wastage or rough cuts

25 YEARS WARRANTY

Stonelam's commitment to the protection and preservation of every slab's properties makes it one of the few providers of a 25-Year colour warranty

EXTREMELY LIGHTWEIGHT

With 3mm+ slabs weighing 750g/sq. ft. and 5mm+ weighing just 1.3kg/sq. ft. , Stonelam slabs are easy to handle and add less dead load to buildings. This also has other advantages like lower application costs, time saving and lesser wastage

PERFECT RIGHT ANGLES

Stonelam slabs are cut at perfect 90-degree angle, removing the need for additional cutting. This reduces unnecessary wastage and leads to lower costs and superior aesthetics

Elegante
Series- 3mm+

Elegante Series- 3mm⁺

(Pronunciation: eh-lay-gahn-tay)

Savour sophistication in Stonelam's 3mm⁺ series—an array of 32 shades, each a timeless embodiment of refined architectural expression. Dive deeper into Elegante, where Prestigio, Regale, and Classico series unfold unique narratives in elegance

Shades: 32

Size: 3m x 1m

Thickness: 3.3mm with Fibreglass Mesh Reinforcement

Weight: 24.6kg, 750gm/sqft

Density: 2.5gm/cm³

PRESTIGIO SERIES

Available in 8 vivid shades, Prestigio is minimalistic and is characterised by sleek lines, a perfect choice for those who value aesthetics

REGALE SERIES

The wide range of striking 12 shades in this series are fresh and vibrant, a perfect choice for those who choose elegance

CLASSICO SERIES

12 impeccable shades is what make this series. The shades are serene and sophisticated at the same time, truly inspired from nature

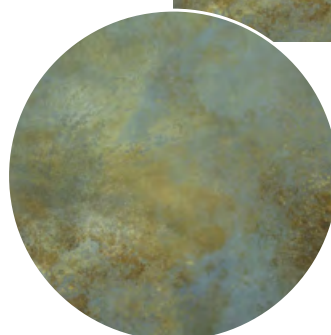

A glimpse of artistry & creativity

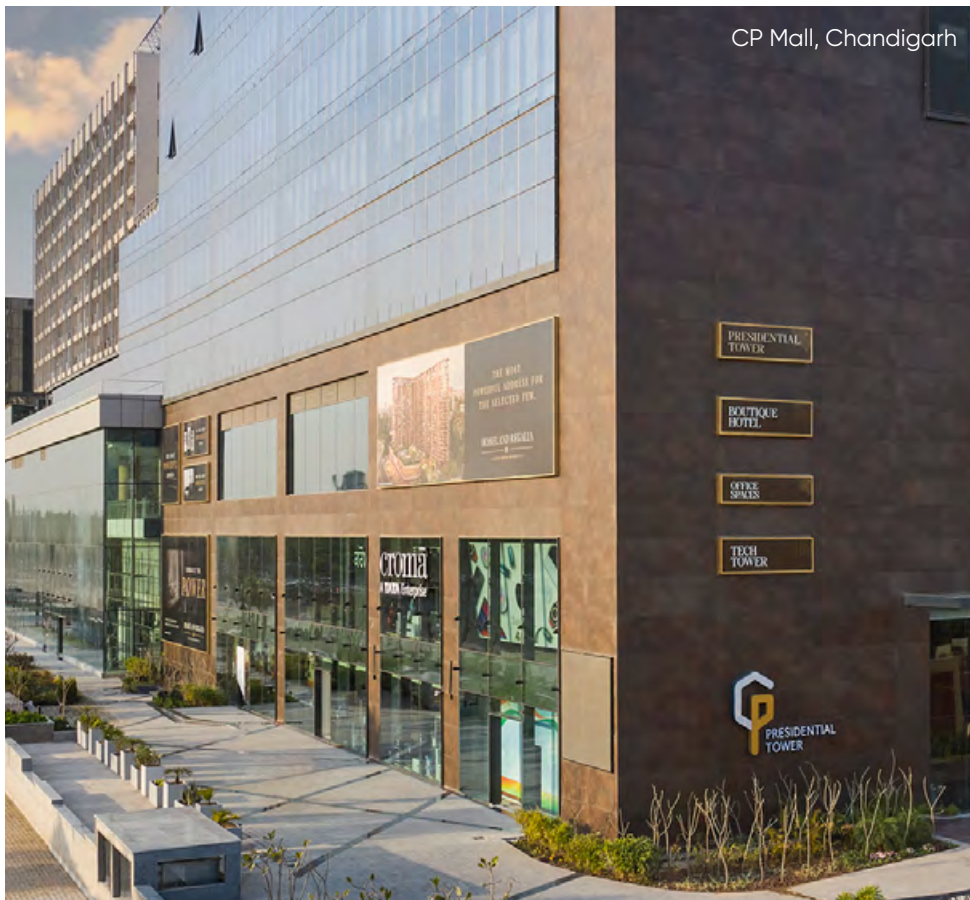

Ossido Verderame

Experience the perfect fusion of artistry, creativity, and premium quality. Explore the Verderame shade, a testament to a passion for design and commitment to aesthetic innovation

Technical Specifications

STONELAM® 3+

Stonelam® 3+ is the basic slab structurally reinforced with a fibreglass mat attached to the back with a special adhesive. Nominal thickness: 3mm

Stonelam® porcelain obtained by wet grinding of clayish raw materials, granite and metamorphic, feldspar – containing rocks and ceramic pigments. Compacted by a special shaping in compatter and sintering at 1200°C, with hybrid firing. With single gauge square edge and with a structural reinforcement in inert material.

ENVIRONMENTAL POLICIES

QUALITY CONTROL

Stonelam® constantly controls the quality of its products during all the stages of production. The controls are carried out in full compliance with the international standard UNI EN ISO 9001, which defines the requirements for the implementation of a quality management system within an organisation.

The corporate processes are geared to improve efficiency in the production and increase customer satisfaction.

ENVIRONMENTAL SUSTAINABILITY AND MATERIALS RECYCLING

The management bases all the research and development projects on its social responsibilities, reducing the environmental impact of production activities in relation to the consumption of resources. Respect for the environment, which characterises Stonelam® and its corporate policy, has led to the installation of a photovoltaic plant for the production of clean electricity on the roof of its factory in Fiorano Modenese. In one calendar year the plant guarantees the production of approximately 1,387 GWh, thereby allowing Stonelam® to produce 10% of its domestic electricity requirements, and, in terms of reduction of CO₂ emissions, corresponds to the contribution made by 105 hectares of forest.

The main raw materials used in the production of Stonelam® ceramic slabs are clay, feldspar and sand of certified origin: these substances are qualitatively selected scrupulously to ensure a homogeneous composition, free of impurities.

Depending on the type, Stonelam® slabs contain 20% to 40% of pre-consumer recycled material, i.e. re-used industrial wastes. In addition, as they are made of natural products, the slabs can be easily ground and recycled in other production cycles and do not release elements into the environment. The choice of using recycled raw materials results in environmental benefit that can be measured in terms of CO₂ emissions not released into the atmosphere.

Each stage of the production process of Stonelam® slabs is designed and developed to guarantee maximum energy efficiency and the minimum environmental impact. The evolved and patented pressing process, which, thanks to the best techniques, significantly reduces consumption and the use of hybrid gas-electric kilns that significantly reduce emissions are examples. Moreover, the lightness of the slabs and the accurate design of the packaging minimise storage space and limit the environmental impact of transport, optimising the processes as compared to other products with heavier surfaces.

Stonelam® is a member of the Green Building Council association, which operates within the framework of sustainable environmental development in the constructions sector. The GBC members promote the dissemination of a culture of sustainable building construction generating a stimulus to opt for natural resources that have the least possible impact for the region and for society.
